

# GLOBAL

# WARNING

Due to the increase of carbon dioxide emission, global temperature is ever increasing at an undesirable rate. At current levels unless we contain global warming under 2°C, by 2050 one-third of all animal species will be at risk of extinction and two billion people will be without drinking water. And there will be only one outcome for humanity and all the other animal species on earth in the future - Extinction.

**Let's do our part to help combat global warming now.**

**Act Now. Change the future.**

Hoping to build a better tomorrow...
