Automated Library visitors attendance system

Library process is fully automated using Easy software 3.0 version. Visitors' attendance is also maintained in library software.

We have details of all students and faculty in library software. All students and faculty have unique identification number; the number is bar-coded in their identity card.

One computer system is installed at the entrance of the library to take visitors attendance; barcode scanner is installed to the system. When the users visited library, their identity cards will be scanned; their log-in attendance will be automatically recorded. When the visitors going out their identity card will be scanned again; visitors will be automatically logged-out. Bulk log-out facility is also available in the software; when large numbers of students have to log-out; all the students can log-out at once. The automated visitor's attendance system is fast and effective.

Reports generation is another convenient feature of the automated visitor's attendance system. Visitor's reports for single day or for a period can be generated. Consolidated reports show number of visitors for a period. Report on members present in library shows how many students and faculty are presently logged into the library.
