Report on Various issues in our body

> Venue: Seminar Hall

Date: 10/02/2016

No. of participants male: 25

No. of participants female:30

Our College had organized a Seminar on "About various issues in the human Body". Around 55 students participated and benefited by the event. The speaker addressed, "Researchers found that the more risk factors participants had, the more likely they were to recognize their need to change. However, one in five individuals with the highest risk (those with five or more cardiovascular risk factors) did not feel a need to improve their health. They also noted that adults who were obese, smoked and didn't get enough physical activity were most likely to report a need to improve their health, while those with high blood pressure and diabetes were least likely to recognize a need to change. These findings highlight the need to raise awareness for cardiovascular risk factors and the importance of heart disease prevention. If many adults are unaware of their cardiovascular risk factors, then it's very unlikely they will take steps to address them. As clinicians, it's our role to ensure that our patients gain a better understanding of their risk(s) and take steps to improve their health."

In this lecture students learned about the various awareness techniques for health issues. During the discussion session participants interact with the speaker for clarification regarding their doubts. The overall programme was very successful.

With positive support from Management Representative Mr. R. Arunkumar, Principal Dr. Y. Vijayakumar and all HODs takes pleasure in appreciating the following students and faculty advisors for this remarkable achievement their continuous support and motivation
