## **Awareness on Epidemic diseases**

Our college has organized **Awareness on Epidemic diseases campaign** in village Thali on 6<sup>th</sup> may 2016. Nearly 55 people participated. Increasing public awareness is vital in the fight against infectious diseases. Public awareness campaigns on spotting the signs and symptoms of infectious diseases and how to prevent them play a key role in helping to stop the spread of such infections.

Public awareness of infectious diseases plays a crucial role in disease control; a lack of feasible information of infectious diseases leads to reduced detection rates, the disruption of treatment, partiality and stigma. Therefore, to abolish the spread of such epidemic calamity the government of respective countries launches specific national disease control plans, using posters, advertisements on television and printed media and other methods to promote the awareness of these diseases in the local population. The appraisal of the awareness levels in rural areas is very important because it help to determine the result of preceding prevention steps made by the government and benchmark the need for arbitrations.

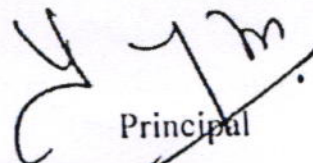

- methods of public awareness
- population and sampling
- Data collection and analysis

We need to use every possible means to protect ourselves from mosquito-borne diseases. These are simple and practical actions that can save you from contracting diseases like dengue fever and malaria. One of the most effective ways to control these diseases is to maintain good environmental hygiene.

**"It is encouraging to find that the public is of the view that to maintain a hygienic environment requires the collective effort of the whole community."**

Noting that the respondents were accustomed to putting refuse in covered litter bins (96%), keeping drains free from blockage (85%) and covering all water containers tightly (67%) to prevent dengue fever. To eliminate mosquito breeding and reduce the risk of being stung by mosquitoes, all preventive measures should be strictly observed.
