Submitted,

Sub: Project Based Learning -Nikki.Build's- Report - Reg.

With respect to the above subject, we organized a Project Based Learning on "Innovative Applications of Programming in Everyday Life" on 21.03.2025, featuring representatives from Nikki.build. The event was attended by second- and third-year AIML students.

The session commenced at 11:00 AM with an introduction by Dr. Sivaprakash C, HoD of AIML, who emphasized the importance of innovation in AI and programming. The team from Nikki.build provided an insightful presentation on how their unique approach to coding languages can revolutionize daily life, simplifying complex processes and improving efficiency. They shared several real-world applications, including a BP calculator that triggers an alarm when blood pressure readings reach critical levels, an intelligent street lighting system, and advancements in automotive technology.

The session was highly engaging, with students encouraged to participate in interactive activities. This hands-on approach allowed them to experience the tech and how these technologies are applied, sparking discussions on their potential impact. Students who actively participated in the activities were rewarded for their engagement, which further fostered enthusiasm among the attendees. The event concluded with a vote of thanks expressing gratitude to Nikki.build, the management, faculty, and students for their involvement in making this event a success. The session was both informative and inspiring, providing valuable insights into the practical applications of Artificial Intelligence and Machine Learning in solving real-world problems.

Herewith, the glimpses of the event have been enclosed.

Yours Sincerely,

4/4/25
Co-ordinator
